"Pressestimmen **Praise for the First Edition** 'Any new user of ICP-MS or anyone contemplating entering the field will find the **Practical Guide to ICP-MS** an essential first step. This book demystifies ICP-MS and shows readers just how accessible a technique it really is. ... [It] is written clearly and is well organized. ... As a practitioner of ICP-MS for more than 20 years, I highly recommend this book as a primer to students, new users, laboratory managers, and users of ICP-MS data. The price of the book is well worth investing for Chapter 20 alone, which deals with the selection criteria for instrument purchase. More-experienced users and teachers will find that this book is a useful source of information on the current state of ICP-MS and its place in analytical atomic spectrometry.'--*Spectroscopy Magazine*

'This book will be particularly useful to students and analytical chemists who are about to use an ICP-MS, and also those in management who might have a basic understanding of atomic spectroscopic techniques but not necessarily ICP-MS. ... [The author] hoped the book might find a place on the analyst's desk or by the instrument and would be well used. Indeed, this is where my copy will probably be found.'--*The Analyst*'... a valuable introduction to the subject for anyone interested in ICP-MS. ... [a] highly informative book '--*Today's Chemist at Work*

'...[this book] highlights everything from basic component descriptions and features to guidelines describing where and when...ICP-MS is most appropriately employed....I look forward to seeing this book used in many training programs, classrooms, and analysis laboratories.' --*Ramon M. Barnes, Director, University Research Institute of Analytical Chemistry and Professor Emeritus of Chemistry, University of Massachusetts, Amherst* Über den Autor und weitere Mitwirkende **Robert J.**

Thomas, GRIC, FRSC is principal of Scientific Solutions, a consulting company based in Gaithersburg, Maryland, that serves the application, training, and technical writing needs of the trace element analysis user community. He has worked in the field of atomic spectroscopy (AS) for almost 40 years, with over 20 years' experience in ICP-MS applications, product development, and sales and marketing support at Perkin Elmer Instruments, Inc. He has written more than 80 technical publications covering a wide variety of atomic spectroscopic subject matter, from the fundamental principles of the technique, to articles solving real-world application problems with AA, ICP-OES, and ICP-MS analytical instrumentation."
